PROFESSIONAL SUMMARY

Computer Science student (accelerated BS/MS, WGU, expected Jan 2027) with hands-on experience evaluating and fine-tuning LLM outputs on coding tasks, and a portfolio of self-directed Python projects spanning full-stack development, data analysis, and rule-based systems. Brings 3+ years of operations leadership — managing teams of 50+ and building process improvements — into a structured, detail-driven approach to technical work.

TECHNICAL PROJECTS

Inventory & Task Tracker — *Python, Flask, SQLite*

- Independent project: designed and built a full-stack CRUD web app end-to-end, with a Flask backend, SQLite persistence layer, and a working create/read/update/delete workflow to replace manual, spreadsheet-style inventory tracking.

Transaction Analysis Tool — *Python, Pandas, Matplotlib*

- Built a data pipeline using Pandas to clean and process sample transaction data, then generated Matplotlib visualizations to surface spending and revenue trends over time.

Compliance Validator — *Python, Rule-Based Logic*

- Designed a configurable, rule-based validation engine for a hypothetical compliance scenario, capable of checking records against multiple criteria and flagging violations automatically.

Algorithms Log — *Python, Java*

- Public repository of 4 solved data structure and algorithm problems, maintained as an ongoing study and reference tool.

WORK EXPERIENCE

DataAnnotation Tech

Remote

AI Data Trainer

June 2026 - Present

- Write, debug, and evaluate Python and SQL solutions** used to test and score LLM coding responses against correctness and quality rubrics.
- Review model outputs for logical errors and hallucination** patterns, providing structured feedback that trainers use to improve response accuracy.
- Maintain a top-tier accuracy rating across evaluation cycles** by consistently applying detailed grading and safety guidelines.

Food Garden Market

Brooklyn, NY

Customer Service Supervisor

December 2022 - June 2026

- Led a team of 50+ associates**, using performance metrics to identify bottlenecks and cut non-peak labor costs by 15%.
- Designed and rolled out a Python-assisted inventory** tracking process that reduced stockouts during peak hours and improved supply turnover by 34%.
- Standardized weekly replenishment workflows across departments**, achieving full adherence to standard operating procedures.

EDUCATION

Western Governors University (WGU)

Millcreek, UT

Accelerated Computer Science Bachelor's and Master's Degree

Graduation Day: January 2027

- Relevant Coursework:** Data Structures and Algorithms, Software Engineering, Computer Architecture, Advanced Database Management.

SKILLS

Languages: Python, Java, SQL, JavaScript/TypeScript, C++, C#, Go

Frameworks & Data: Flask, FastAPI, React, Node.js, Pandas, Matplotlib, PostgreSQL, MongoDB, SQLite

Tools & Practices: Git, CI/CD, AWS/GCP basics, Agile, RAG & LLM fine-tuning, Linux

Languages Spoken: Spanish (Native), English (Fluent)
